

What is Vay?

Vay is a technology-enabled mobility company that aims to bring sustainable, affordable and door-to-door-mobility services to metropolitan areas. Teledrivers bring the car directly to a valid pick-up location for the customer and pick it up after the journey is completed, eliminating the time-consuming search for a parking spot. While in the car, the customers drive themselves. In addition to teledriving, Vay aims to gradually introduce autonomous driving functions in the system as it is safe and permitted to do so.

How does the service work?

What is teledriving?

Our teledriving technology enables a person ("the teledriver") to control a vehicle remotely ("teledriving"). Teledrivers sit at a teledrive station with a steering wheel, pedals and all necessary operation devices developed according to automotive industry standards.

The visual perception is reproduced via camera sensors and transmitted to the screens of the teledrive station. Road traffic sounds, such as emergency vehicles and other warning signals, are transmitted via microphones to the teledriver's headphones.

Benefits

A convenient & sustainable solution for the mobility turnaround

Reducing private car ownership

Reducing emissions (with Vay's highly-utilized electric fleet)

Who are the founders?

Thomas von der Ohe
Co-founder, CEO

Fabrizio Scelsi
Co-founder, VP Automotive Engineering

Bogdan Djukic
Co-founder, Director Teledrive Experience

Who are the investors?

Our investors include Kinnevik, Eurazeo, Creandum, Coatue, Atomico, Project A

Patrick Pichette
ex-Google CFO, Chairman of Twitter board

Niklas Zennström
Founder of Skype, Kazaa, Atomico

Cristina Stenbeck
Spotify Board, Chairman of Zalando Board

Qasar Younis
CEO Applied Intuition, COO/Partner at Y Combinator

\$ 100M+ funding
